PROFILE SUMMARY

AI/ML engineer and software builder (B.E. AI & ML, **CGPA 8.7/10**) who designs and ships end-to-end AI systems: **agentic workflows**, **RAG/LLM pipelines** and full-stack products. Works with Google ADK, Gemini, AWS Bedrock, Strands Agents, LangChain, FastAPI and React, with Firebase/SQL data layers and Docker/CI-CD deployment. Covers system architecture, backend design and API integration, and can quickly understand an unfamiliar problem and turn it into working software under tight time limits. Has led teams in **5 hackathon events**, including ISRO, Google Solution Challenge and ANVIL 2026.

EDUCATION

A.J. Institute of Engineering and Technology, Mangalore - B.E. Artificial Intelligence & Machine Learning (VTU 2022 Scheme) **CGPA: 8.7/10** | Expected May 2028
CBSE: 83% - SBEMS | Karnataka PUC: 93% - SMK PU College

TECHNICAL SKILLS

AI/ML & GenAI	LangChain, Google ADK, AWS Bedrock, Strands Agents, RAG Architecture, Agentic Workflows / AI Agents, Prompt Engineering, Vector Databases (ChromaDB), Embeddings, Scikit-learn, PyTorch, Pandas, NumPy
Backend & APIs	Python (Flask, FastAPI), Node.js (Express), REST APIs, Google Gemini API Integration, Firebase Auth, SQL Database Design, SQLAlchemy
Languages & Frameworks	Python, JavaScript, TypeScript, SQL, React, Vite, Tailwind CSS, Node.js
Databases	Firestore, SQLite, MongoDB, ChromaDB (vector)
Cloud / DevOps / Tools	Docker, Git, GitHub Actions, CI/CD, System Design

SELECTED PROJECTS

IEP Continuity Partner - Agentic Longitudinal Accountability Platform | Google ADK, Gemini API, FastAPI, React, Firestore, Docker

- Built a **closed-loop drift-detection engine**: Google ADK/Gemini agents interpret progress evidence and extract quoted observations, while deterministic FastAPI logic compares them with confirmed commitments and computes delivery shortfalls.
- Designed a **human-in-the-loop** flow that needs explicit user verification before any state change is saved, backed by Firestore longitudinal memory, an append-only audit trail and a Docker-containerized, Cloud Run-ready backend.
  Repo: github.com/thejas-tech-hub/iep-continuity-partner | **Live:** iep-continuity-partner.web.app

Enterprise RAG-LLM Engine | Python, Flask, LangChain, ChromaDB, Streamlit

- Architected a **config-first, dependency-injected RAG backend** combining LangChain orchestration, ChromaDB vector retrieval and a pluggable **multi-provider LLM layer** (Gemini, OpenAI, Anthropic, Ollama).
- Built a Flask REST API (chat, upload, agent routing, tool discovery) plus a Streamlit app for PDF ingestion and question answering.
  Repo: github.com/thejas-tech-hub/Rag-LLM

Pathfinder AI - Campus Placement ERP | React, Python, FastAPI, SQLAlchemy, HuggingFace Embeddings

- Designed a **two-stage matching pipeline**: a hard-rule Policy Gateway (CGPA, backlogs, branch), then an AI Semantic Matcher using **all-MiniLM-L6-v2** embeddings to compute a weighted Career Readiness Score.
- Built role-based dashboards (student, recruiter, admin/TPO) on a SQLAlchemy/SQLite backend, with an immutable audit trail and CSV/JSON/PDF export of ranking decisions.
  Repo: github.com/thejas-tech-hub/pathfinder-ai

SevaSphere - AI Disaster Relief Coordination Platform | React, Tailwind CSS, Firebase, Google Gemini, GDACS API

- Built for **Google Solution Challenge 2026** (Smart Resource Allocation): a deployed **3-layer AI system** with Gemini crisis forecasting from live GDACS disaster data, Gemini Vision OCR to digitize handwritten NGO field reports, and a hybrid JS pre-filter + Gemini-ranked volunteer matching engine.
- Integrated Google Maps crisis visualization and Firebase Authentication/Firestore for real-time data.
  Repo: github.com/thejas-tech-hub/sevasphere-2026 | **Live:** sevasphere-2026.web.app

INDIA.RUNS - Candidate Ranking & Hireability Pipeline | Python, BM25, Sentence Transformers, Cross-Encoder, Phi-3, pytest

- Engineered an end-to-end **CPU-only ranking pipeline for 100,000 candidate profiles**: honeypot detection, behavioral scoring, hybrid BM25 + dense retrieval with Reciprocal Rank Fusion, cross-encoder reranking and LLM reasoning, giving a Top-100 shortlist and structured LLM explanations for the Top 10. Filtered **9,231 (9.2%)** adversarial/synthetic profiles.
- Built for reproducibility and limited resources: **~254 s runtime** with no GPU or external APIs, and **282/282 unit tests passing**.
  Repo: github.com/thejas-tech-hub/India_runs_hackathon

ADDITIONAL PROJECTS

StudyGenie (AI student chatbot), **HealVision** (Gemini healthcare assistant), **PCAM Precision Engine** (associative-memory retrieval), **Ticket Triage** (AI ticket-triage agent), **MyOwnJarvis** (agentic voice assistant), **Advanced Fraudulent Link Detector** (phishing classifier), and **Trading Signal Pipeline** (MLOps batch pipeline).

HACKATHONS & LEADERSHIP

- **Team Lead, ANVIL 2026** (AlgoRhythms), Scaler School of Technology: led 4 members as **system architect / AI integration lead** in a 24-hour national hackathon; designed an agent-based architecture under time limits.
- **Team Lead, Bharatiya Antariksh Hackathon 2026**, ISRO (Hack2skill): led team idea submission for a national-level AI/space-tech challenge.
- **Team Lead, Solution Challenge 2026: Build with AI**, Google: led team to a successful AI-powered prototype submission.
- **Team Member, Amazon ML Challenge 2026: large-scale entity resolution** on millions of records: candidate blocking, similarity features, ML-based matching and validation under tight time limits.
- **Team Lead:** Hackfest 26', NMAM Institute of Technology (30-hour CTF) | NEXATHON 2025, Shree Devi Institute of Technology, IEEE Mangalore Subsection (24-hour national-level hackathon).
